

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended) A method for detaching a carrier for cell culture from a cultured cell formed on a surface of said carrier for cell culture, which comprises the step of bringing the carrier for cell culture into contact with a compound represented by the following formula (I) or a polyphosphoric acid or a salt thereof:

wherein L<sup>11</sup> represents a substituted or unsubstituted divalent hydrocarbon group~~divalent bridging group~~; and M represents hydrogen atom or a cation,~~or a polyphosphoric acid or a salt thereof~~.

2. (original): A method for culturing a cell by using a carrier for cell culture, which comprises the steps of:

(1) bringing a cell culture containing a cultured cell adhered on a surface of the carrier for cell culture into contact with a compound represented by the formula (I) according to claim 1, or a polyphosphoric acid or a salt thereof, and

(2) detaching the cultured cell from the cell culture and transplanting said cell on a surface of other cultured cell.

3. (original): A method for transferring a cell, which comprises the steps of:

(1) culturing a cultured cell formed on a carrier for cell culture while said cultured cell is allowed to be in contact with a surface of other carrier for cell culture with weighting; and

(2) bringing a cell culture obtained in the aforementioned step (1) into contact with a compound represented by the formula (I) according to claim 1, or a polyphosphoric acid or a salt thereof to detach the carrier for cell cultures.

4. (original): A method for laminating cell layers, which comprises the steps of:

(1) culturing a cultured cell formed on a carrier for cell culture while said cultured cell is allowed to be in contact with other cultured cell with weighting; and

(2) bringing cell culture obtained in the aforementioned step (1) into contact with a compound represented by the formula (I) mentioned in claim 1, or a polyphosphoric acid or a salt thereof to detach the carrier for cell culture.

5. (original): The method according to claim 1, wherein the carrier for cell culture comprises a calcium alginate gel layer.

6. (original): The method according to claim 1, wherein the carrier for cell culture comprises laminated calcium alginate gel layer and cell adhesion gel layer.

Claim 7 (canceled).

8. (original): The method according to claim 1, wherein the divalent hydrocarbon group is a substituted or unsubstituted methylene group.

9. (currently amended): The method according to ~~any one of claims~~ claim 1, wherein the compound represented by the formula (I) is a compound represented by the following formula (II):

wherein  $\text{L}^{21}$ ,  $\text{L}^{22}$ , and  $\text{L}^{23}$  independently represent a divalent hydrocarbon group;  $\text{R}^{21}$  and  $\text{R}^{22}$  independently represent a substituted or unsubstituted alkyl group, or a substituted or unsubstituted aryl group; and M represents hydrogen atom or a cation.

10. (original): The method according to claim 1, wherein the compound represented by the formula (I) is a compound represented by the following formula (III):

wherein  $\text{L}^{31}$ ,  $\text{L}^{32}$ ,  $\text{L}^{33}$ ,  $\text{L}^{34}$ , and  $\text{L}^{35}$  represent a divalent hydrocarbon group; and M represents hydrogen atom or a cation.

Claims 11-13 (canceled).

AMENDMENT UNDER 37 C.F.R. §1.111  
U.S. Appln. No. 10/690,568

14. (new): The method according to claim 1, wherein the carrier for cell culture is brought into contact with the compound represented by formula (I) for a period of from 5 minutes to 2 hours to effect a removal treatment.

15. (new): The method according to claim 1, wherein the compound of formula (I) is 1-hydroxyethane-1,1-diphosphoric acid.
